INCHIESTA ITALIANA

Ecco il Grande fratello Google Ci scheda per la pubblicità

Gli identikit conservati un anno e mezzo in 450mila server. Chi va in rete viene inseguito da inserzioni dedicate. Esiste un'operazione per disattivare il tracciamento ma è a carico dell'utente. Gusti, orientamenti sessuali e religiosi

di **FABIO TONACCI** e **MARCO MENSURATI**

ROMA - Google ci spia. Traccia e registra i nostri movimenti sulla rete. Vede quello che cerchiamo, vede quello che leggiamo o guardiamo. Sa dove siamo. Conosce i nostri interessi, anche quelli che vogliamo tenere nascosti. Controlla il contenuto e i destinatari delle nostre email. Pochi lo sanno, qualcuno lo sospetta, quasi tutti lo ignorano, ma è proprio così. Ci spia. E poi ci scheda, conservando la mole di informazioni che ci riguardano in un database per un anno e mezzo. Otto italiani su dieci che usano Internet sono finiti nei database

How Unique – and Trackable – Is Your Browser?

Your browser fingerprint **appears to be unique** among the 1,503,788 tested so far.

Currently, we estimate that your browser has a fingerprint that conveys **at least 20.52 bits of identifying information**.

The measurements we used to obtain this result are listed below. You can read more about our methodology, statistical results, and some defenses against fingerprinting in [this article](#).

Help us increase our sample size:

Browser Characteristic	bits of identifying information	one in x browsers have this value	value
User Agent	20.52+	1503788	Mozilla/5.0 (Macintosh; U; Intel Mac OS X 10_6_7; en-US) AppleWebKit/534.10 (KHTML, like Gecko) Chrome/8.0.552.237 Safari/534.10
HTTP_ACCEPT Headers	4.05	16.62	text/html, */* ISO-8859-1,utf-8;q=0.7,*;q=0.3 gzip,deflate,sdch en-US,en;q=0.8

Broken Promises of Privacy: Responding to **the** Surprising Failure of Anonymization

Paul Ohm

University of Colorado Law School

[UCLA Law Review, Vol. 57, p. 1701, 2010](#)
[U of Colorado Law Legal Studies Research Paper No. 9-12](#)

Abstract:

Computer scientists have recently undermined our faith in **the** privacy-protecting power of anonymization, **the** name for techniques for protecting **the** privacy of individuals in large databases by deleting information like names and social security numbers. These scientists have demonstrated they can often 'reidentify' or 'deanonymize' individuals hidden in anonymized data with astonishing ease. By understanding this research, we will realize we have made a mistake, labored beneath a fundamental misunderstanding, which has assured us much less privacy than we have assumed. This mistake pervades nearly every information privacy law, regulation, and debate, yet regulators and legal scholars have paid it scant attention. We must respond to the surprising failure of anonymization, and this Article provides the tools to do so.

EverCookie

- Evercookie is a javascript API available that produces 2 extremely persistent cookies in a browser. Its goal is to identify a client even after they've removed standard cookies, Flash cookies (Local Shared Objects or LSOs), and others. Evercookie accomplishes this by storing the cookie data in several types of storage mechanisms that are available on the local browser. Additionally, if evercookie has found the user has removed any of the types of cookies in question, it recreates them using each mechanism available.

Three 'Cookies' utility windows are overlaid on the terminal:

- The top window shows 'Search by URL' set to 'google'.
- The middle window shows 'Search by URL' set to 'facebook.com' and a table of cookies for 'facebook.com':

Site	Cookie Name
facebook.com	e
facebook.com	presence
facebook.com	sct
facebook.com	lxs
facebook.com	lxe
facebook.com	lo

Below the table, the details for the selected 'lxe' cookie are shown:

- Name: lxe
- Content: mf%40matteoflora.com
- Domain: .facebook.com
- Path: /
- Send For: Any type of connection
- Expires: August 20, 2010 7:13:54 AM

Buttons for 'Remove Cookie', 'Remove All Cookies', and 'Close' are visible at the bottom of the window.

NoScript

INSTALL

PC WORLD WORLD CLASS 2006

The NoScript Firefox extension provides extra protection for Firefox, Seamonkey and other mozilla-based browsers: this free, open source add-on allows [JavaScript](#), [Java](#) and [Flash](#) and other [plugins](#) to be executed only by trusted web sites of your choice (e.g. your online bank), and provides

Fight CLICKJACKING Now!

the most powerful [Anti-XSS protection](#) available in a browser.

NoScript's unique [whitelist based pre-emptive script blocking](#) approach prevents exploitation of security vulnerabilities (known and even not known yet!) with no loss of functionality...

You can enable JavaScript, Java and plugin execution for sites you trust with a simple left-click on the [NoScript status bar icon](#) (look at the picture), or using the contextual menu, for easier operation in popup statusbar-less windows.
[Watch the "Block scripts in Firefox" video](#) by cnet.

Staying safe has never been so easy!

The Fool

You've gone incognito. Pages you view in this window won't appear in your browser history or search history, and they won't leave other traces, like cookies, on your computer after you close the incognito window. Any files you download or bookmarks you create will be preserved, however.

Going incognito doesn't affect the behavior of other people, servers, or software. Be wary of:

- Websites that collect or share information about you
- Internet service providers or employers that track the pages you visit
- Malicious software that tracks your keystrokes in exchange for free smileys
- Surveillance by secret agents
- People standing behind you

[Learn more](#) about incognito browsing.

 Because Google Chrome does not control how extensions handle your personal data, all extensions have been disabled for incognito windows. You can reenable them individually in the [extensions manager](#).
